CSS th

Defines the properties for a table header cell. **Browser/User Agent Support**

IE	Netscape	Mozilla	Opera	Sa
2.0+	1.1+	1.0+	4.0+	

Example

This example specifies that all table header cells should have top and bottom borders, but no left or right borders. It also sets the font-size to one size smaller than the parent element text:

```
th {  
border-bottom: navy solid thin;  
border-top: navy solid thin;  
border-left: none;  
border-right: none;  
font-size: smaller;  
}
```

Remarks

Because table header cells are children of "table" and "tr" elements, they will inherit some of their styles from those elements.
